# WATER PRESSURE BOOSTER SYSTEMS: SERIES WPB SUBMITTAL DATA

Furnish and install a packaged water pressure booster system series WPB as manufactured by **Penn Pump & Equipment Company, Inc.,** of Hatfield, PA (215-997-6100). The packaged and tested system shall provide the capacity as scheduled on the drawings.

- **A.** The pump shall be all stainless steel, end suction, close coupled centrifugal type with a minimum of 175 psi case working pressure, equipped with a 304SS shaft sleeve and a mechanical seal. The pump shall include a bronze modulating thermal safety valve to prevent overheating of the pump casing.
- **B.** Each pump shall include a 200psi lug style butterfly isolation valve on the inlet and outlet of each pump for ease of service of the pump or check valve, and a VFD compatible wafer check valve. All pump branches and valves are to be 2.5" to minimize pump system friction loss.
- C. Provide a NEMA 1 system logic controller mounted and wired to contain:
  - Single point power connection
  - Main disconnect switch with cover interlock
  - Individual motor circuit protectors
  - Variable Frequency Drives, each with a pressure transducer
  - HOA selector keypad buttons
  - No flow system shut down
  - Electronic pump alternation
  - Lead pump failure protection
  - Low suction shut down
  - High System pressure shutdown with alarm light
  - Remote monitoring contacts
- D. The packaged pumping system shall be factory assembled and tested with Schedule 10 304 Stainless Steel piping and shall include pressure gauges. It shall be cleaned and painted with a high grade enamel prior to shipment. The service of a factory trained representative shall be made available on the project site for start-up and instructing operating personnel.

**Q**PUMP

The integrated pump specific software and setup parameters, allow the operator to set up specific control values for a wide range of applications. iQpump will automatically adjust pump operating conditions, as the process variables change while still maintaining optimum pump performance and protection.

Most existing systems, which require constant pressure or flow control, are using bypass lines, pressure release valves, throttling valves or impeller trim adjustments. The most efficient method is pump speed control. Pump speed control will reduce energy consumption, while maintaining system optimization.

The iQpump Controller can be configured for Simplex, Duplex, Triplex or up to an eight-pump system. One iQpump Controller can be used as a master, which can also control one or two secondary pump motors. The secondary pump motors can be connected using mechanical motor starters, reduced voltage soft starters, or additional iQpump drives. The software is structured in such a way that it only has a few basic pump parameters to be setup to run this application.

The iQpump controller is available from 5 to 500 horsepower. In addition to Water Pressure Booster Pumps in Commercial and Industrial applications, the iQpump controller is suitable for a variety of other pumping applications such as Submersible Deep Well Pumps, Storage Tank Level Control, Metering Pumps, and HVAC pumps and fans.
